From switches, wiring runs to individual devices:

- Lighting circuits are wired to their respective switches, often with separate fuse protection.

- Instrumentation is wired to a dedicated circuit, often with a separate fuse or circuit breaker.

4. Grounding System

All electrical devices are grounded to the boat's chassis or a dedicated grounding bus. Proper grounding prevents electrical noise and reduces the risk of shocks or fires.

5. Additional Features

- Trolling Motor Wiring: Usually connected via a dedicated circuit with a circuit breaker or fuse, often with a separate switch or joystick control.
- Sensors and Gauges: Wired to power, signal, and ground, with wiring color codes indicating their functions.

Wiring Color Codes and Symbols

Understanding the wiring color codes enhances your ability to trace circuits and diagnose issues. Common color conventions include:

- Red: Power supply (positive voltage)
- Black or Brown: Ground or negative connection
- Yellow or Green: Signal wires, such as for sensors
- Blue: Accessories or lighting circuits
- White: Neutral or common return paths

Symbols on schematics denote:

- Switches: Open or closed contacts
