Sample Practice Questions and Rationales

To illustrate, here are some example questions you might encounter in the NCLEX PN question bank reproductive system, along with detailed rationales.

Example 1: Menstrual Disorders

Question: A client reports severe cramping and heavy bleeding during her menstrual period. Which of the following is the most appropriate nursing intervention?

- a) Encourage the client to increase fluid intake during menses
- b) Educate the client about the use of NSAIDs for pain relief
- c) Advise the client to avoid physical activity during her period
- d) Suggest the client take iron supplements daily

Answer: b) Educate the client about the use of NSAIDs for pain relief

Rationale: NSAIDs are effective in reducing menstrual cramping and bleeding by decreasing

prostaglandin production. Encouraging fluid intake (a) may be helpful but does not directly address pain. Advising to avoid activity (c) is unnecessary unless the client experiences excessive fatigue. Iron supplements (d) help prevent anemia from heavy bleeding but do not alleviate pain. The priority is symptom management with NSAIDs.

Example 2: Reproductive Cancers

Question: A client diagnosed with cervical cancer is scheduled for a hysterectomy. Which preoperative teaching is most important for the nurse to provide?

- a) The possibility of hormone replacement therapy post-surgery
- b) The need for pelvic rest after surgery
- c) The importance of regular Pap smears in the future
- d) That the surgery may cause infertility

Answer: d) That the surgery may cause infertility

Rationale: A hysterectomy involves removal of the uterus, which results in infertility. While hormone therapy (a) may be relevant, it depends on whether the ovaries are preserved. Pelvic rest (b) and future Pap smears (c) are important but not the most immediate concerns pre-surgery. The primary teaching point is informing the client about the impact on fertility.

Example 3: Pregnancy and Prenatal Care

Question: A pregnant client at 24 weeks gestation reports visual disturbances and swelling in her hands and face. What is the priority nursing action?

- a) Measure her blood pressure
- b) Assess fetal heart tones
- c) Administer prescribed antihypertensive medication
- d) Encourage bed rest

Answer: a) Measure her blood pressure

Rationale: Visual disturbances and facial swelling can indicate preeclampsia, a hypertensive

disorder requiring prompt blood pressure measurement to assess severity. While assessing fetal status (b) is important, maternal blood pressure takes precedence. Administering medication (c) should be done after assessment. Bed rest (d) may be part of management but is not the immediate priority.

Tips for Effective Use of the NCLEX PN Question Bank

- Consistent Practice: Set aside regular time for practice questions to build familiarity.
- Review Rationales: Always read explanations to understand the reasoning behind each answer.
- Focus on Weak Areas: Use performance analytics to identify and target weak topics.

Remember that each question is an opportunity to reinforce your knowledge, clarify misconceptions, and prepare for real-world patient care.

Good luck on your NCLEX PN journey!

Question What is the primary function of the ovaries in the female reproductive system? The primary function of the ovaries is to produce eggs (ova) and secrete hormones such as estrogen and progesterone, which regulate the menstrual cycle and support pregnancy. Which hormone is responsible for triggering ovulation? Luteinizing hormone (LH) is responsible for triggering ovulation by causing the mature follicle to release an egg. What are common signs and symptoms of endometriosis? Common signs include pelvic pain, painful periods, pain during intercourse, and infertility. Symptoms may vary and can include heavy menstrual bleeding. Which diagnostic test is commonly used to confirm pregnancy? A human chorionic gonadotropin (hCG) blood or urine test is commonly used to confirm pregnancy. What are the primary risk factors for developing cervical cancer? Risk factors include human papillomavirus (HPV) infection, smoking, multiple sexual partners, a weakened immune system, and early sexual activity. How can a nurse educate a patient about preventing urinary tract infections (UTIs)? Patients should be advised to maintain good hygiene, stay well-hydrated, urinate frequently, wipe from front to back, and avoid irritating soaps or products. What is the purpose of a Pap smear test? A Pap smear is used to screen for cervical cancer and detect abnormal cervical cells early, allowing for prompt treatment.

Which medication is commonly prescribed for menopause symptoms? Hormone replacement therapy (HRT), which may include estrogen alone or combined estrogen-progestin therapy, is commonly prescribed to manage menopausal symptoms. What are signs of preeclampsia during pregnancy? Signs include high blood pressure, proteinuria, severe headaches, visual disturbances, abdominal pain, and swelling of the hands and face.
